

Case Study on Named Entity Recognition

Agenda:

- Introduction
- Application Workflow
- System Architecture
- Demo
- User Stories
- Impact

Before proceeding further with the presentation

To Do:

- For accessing Demo hoisted on Hugging Face spaces
Click on the following HF logo:

[Click to Launch app](#)

- For accessing limited functionality app hosted online,
Start the app instance and resume back to this ppt.
by clicking on the Following streamlit logo :

[Click to Launch limited
functionality app](#)

Input

- Select Model
- Query text

Output

- Extracted Entities

Input

- Select Mode
- Set hyperparameters

Output

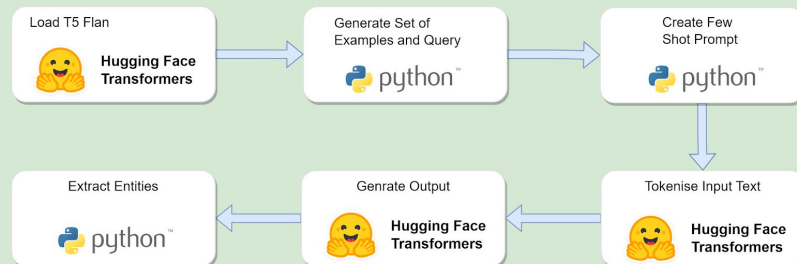

- Trained Model
- Validation and performance metrics

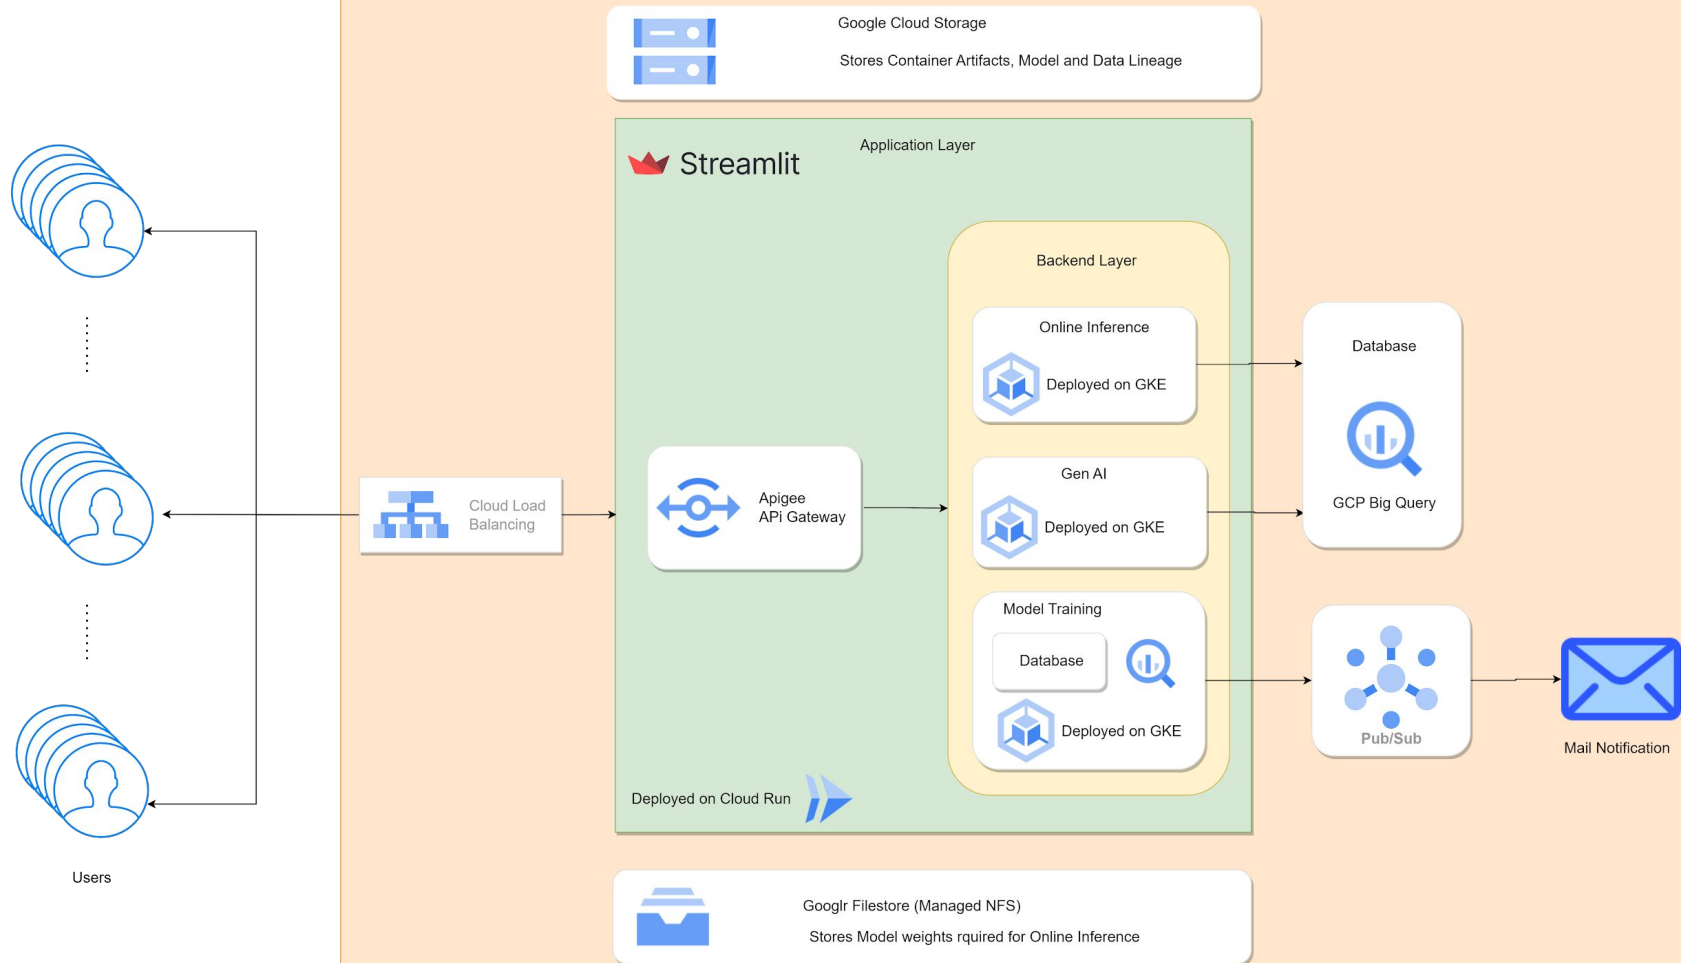

Input

- Select T5 Model variant
- Illustrative Examples
- Query text

Output

- Extracted Entities

Online Inference**Model Training****Gen AI**

Demo

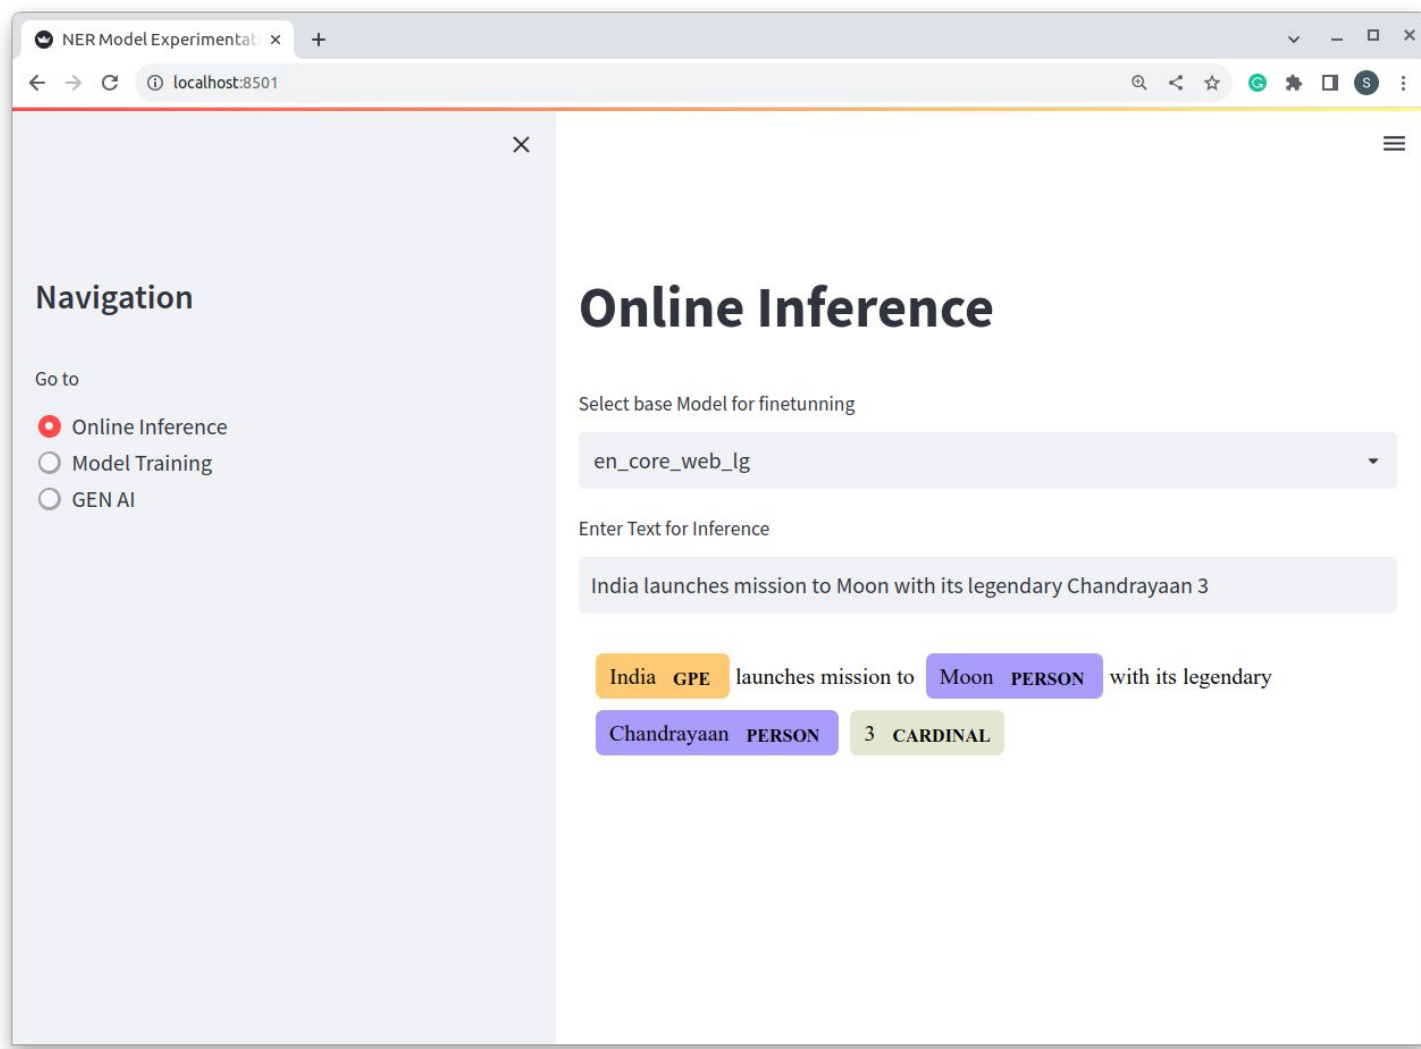

Launch Full Application Hosted Locally

- Online Version of the app is available at : Hugging Face spaces : [Link](#)
- Limited functionality app is also available at : Streamlit cloud : [Link](#)

User Stories

Online Inference

- Select model
- Pass input Query text
- Entities will be extracted

User Stories

Model Training

- Select model
- Set Hyperparameters
- Upload Data

Few-Shot Named Entity Recognition with Flan

Select Flan Model

google/flan-t5-base

Few-Shot Examples

Number of Examples

2

Example 1 (Text)

The LED board on the PCB was malfunctioning.

Example 2 (Text)

The resistor R1 is connected to the circuit.

Example 1 (Label)

LED board

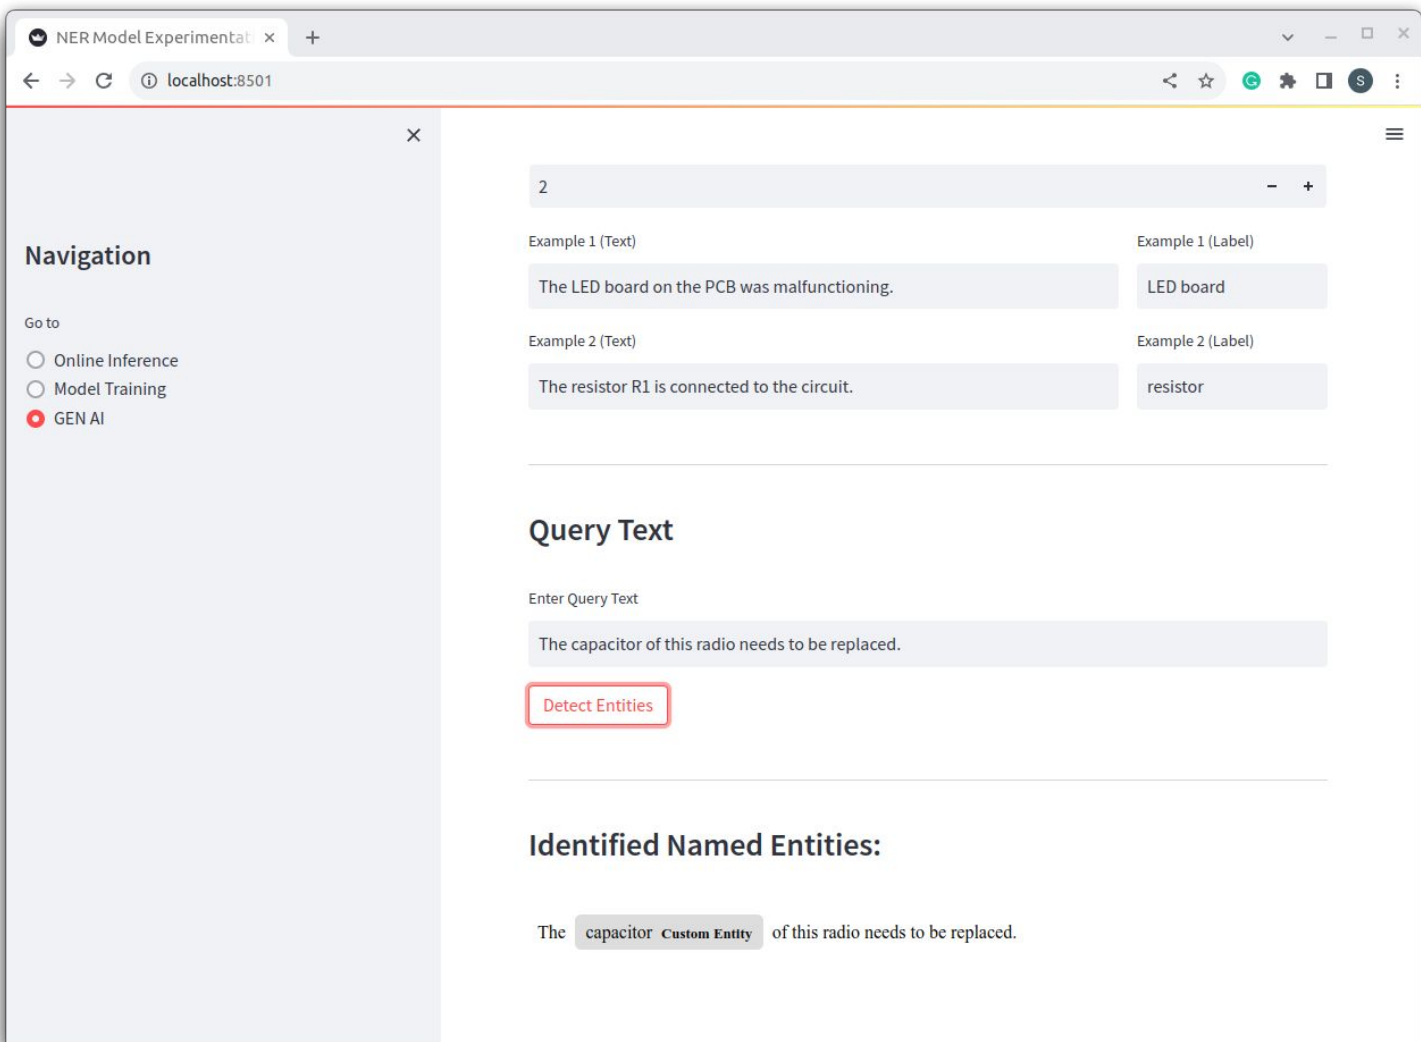

Example 2 (Label)

resistor

User Stories

Gen AI

- Pass input Query text
- Entities are extracted

Impact

This solution will have impact across industries where unstructured data of following nature needs to be processed

Processes textual references in
image or video

Processes speech in audio
signal

Processes unstructured textual
data
